

AN: PAT 2000-308612
TI: Monitoring apparatus for e.g. intranet, internet
PN: **JP2000089818-A**
PD: 31.03.2000
AB: NOVELTY - A web server (24) transmits the fixed screen data (21d) and a display program (22p) to a fixed data memory (21) by access. The software memory of a monitoring terminal (30) stores a web software (31) for giving a variable data demand periodically to a data transmitter which sends the variable data to a variable data memory by variable data demand.
DETAILED DESCRIPTION - The variable data memory updates the stored variable data. The fixed data memory stores the display program for combining the variable data with the fixed screen data to be shown on a monitoring screen (32).; USE - For e.g. intranet, internet. ADVANTAGE - Eases maintenance of intranet. Improves display velocity of monitoring apparatus and reduces transmission load. DESCRIPTION OF DRAWING(S) - The figure shows the model diagram of the monitoring apparatus. Fixed data memory 21 Fixed screen data 21d Display program 22p Web server 24 Monitoring terminal 30 Web software 31 Monitoring screen 32
